

Mattiolo Engineering
A new science in skincare

If you want a skin care treatment that addresses sagging skin, wrinkles, and dry skin, on the face, neck and/or chest. Also addresses crepe skin on the arms, legs, uneven skin tone cellulite, or need lightening under the arms or the intimate areas. Then you need to try the Collagenizer treatment using the DermoElectroPoration (D.E.P) technology. This machine has been cleared by the FDA which can be used as an alternative to needles. Microneedling has been an effective way of introducing drugs and cosmeceuticals into the skin, with the results of firming and hydration. But now D.E.P, a non-needle machine with its patented technology can do the same with no pain or numbing needed. Best of all, no downtime! There is so much that can be done with this machine... even use it to infuse PRP for rejuvenation.

This technology combined with Ultrapeel microdermabrasion, or dermaplaning, or vacu-dermie and/or radio frequency, will really enhance the overall results.

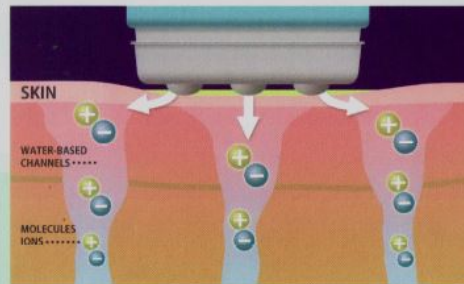

How does D.E.P. work?

DermoElectroPoration is a patented proprietary technology of Mattiolo Engineering Labs in Florence, Italy. This technology is to be an incredible procedure that allows the transdermal delivery of whatever substance the operator wants to be absorbed into the skin.

DermoElectroPoration which uses the skin's water based intercellular channels to promote transdermal delivery. The machine is unique and substantially different from electrophoresis, micro-current, and galvanic devices because of the continuous, very low reversed polarity current. The D.E.P. delivers non-invasive, instant and long lasting effects. Moreover, macro molecules like collagen can be delivered for the first time!

Two powerful cosmeceuticals are used in the treatments. D-More's collagen based gel which contains an injectable medical grade of organic bovine collagen along with Hyaluronic acid and/or D-More's Vitamin C cream, stable and has anti-oxidant activity that also has UV-A and UV-B protection.

Results are lightening and brightening.
